Comet vs. Asteroid

A **comet** is a *small solar system body*. They can be as small as 100 meters or as big as 40 kilometers across. They have such low mass that they do not become spherical, or round. Most comets have *elliptical orbits* around the sun. Some comets have 200-year orbits, and others take millions of years to complete on orbit.

Comets are distinguised by their *coma* and their *tail*. A *coma* is a thin, fuzzy atmosphere that surrounds the center of the comet. Like comets, comas are made up of ice and dust.

They form when a comet passes close to the sun. A *tail* is the trails of gas and dust that a comet leaves behind as it passes through the solar system. These trails usually leave behind solid debris of dust particles.

Comet Vocabulary

small solar system body: an object in the solar system that is not a planet, dwarf planet or satellite of a planet or dwarf planet.

coma: a thin, fuzzy atmosphere that surrounds the center of the comet.

tail: the trails of gas and dust that a comet leaves behind as it passes through the solar system.

An asteroid is a small rocky body that orbits the sun. Asteroids are sometimes referred to as minor planets. Asteroids are made up of carbon, rocks, and metals. Most asteroids in our solar system have orbits that lie between Mars and Jupiter. Unlike comets, asteroids do not have a coma or a tail.

The biggest recorded asteroid is called Ceres. Ceres is 1,000 kilometers across and roughly a quarter the size of our moon.

Asteroid Vocabulary

minor planet: a celestrial body that moves around the sun and is not considered large enough to be a planet.

celestial body: a natural object that is visible in the sky.

Reading Comprehension

1. What is the main idea of the passage in page			
2. What are the differences between a comet care the similarities?	ınd an aste	eroid? Wh	
3. In outer space there is no air resistance; al stay in motion. With that in mind, what do yo and asteroids to move?	Il objects i ou think co	n motion auses com	will nets
True or False? For questions that you mark forment so that it is true.	alse, re-wr	ite the sta	ate-
l. An asteroid has a tail.	True	False	
2. A comet has an orbit	True	False	
3. The coma is just an optical illusion	True	False	
4. Some asteroids can be as big as our moon	True	False	
5. A small solar system body is not a planet	True	False	
6. Comets are not round.	True	False
